

BROWSEJOBS.ai

THE WORLD'S FIRST AI-DRIVEN SKILLING & PLACEMENT PLATFORM

MASTER BUILD SPECIFICATION • FOR CLAUDE CODE

Platform Build Spec

One source of truth for the marketing website + full LMS. Brand, design system, data model, features by role, payments, compliance and build order — everything the engineer needs, in one place.

VERSION 1.0 • JULY 2026

INTERNAL • IBROWSEJOBS TECHNOLOGIES PVT LTD

BrowseJobs.ai — Master Build Specification

For: Claude Code (and any engineer building the platform) **Owner:** Dr. Krish Bhargav, Founder & CEO, IBrowseJobs Technologies Pvt Ltd **Version:** 1.0 · July 2026 **Scope:** Marketing website + full LMS platform (one system, shared design + data)

How to use this document. This is the single source of truth. Read it top to bottom before writing code. Every colour, font, route, table, and rule below is binding. Where this doc says "MUST," treat it as a hard requirement. Where it says "SHOULD," it's a strong default you may deviate from only with a stated reason. Do not invent brand colours, copy, or claims that aren't here — if something is missing, ask rather than guess. Build incrementally, and keep a running [PROGRESS.md](#) as you complete each module.

0. TL;DR for the builder

You are building **one platform** with two front doors:

1. **The marketing website** (public) — converts visitors into leads and enrolments. Funnels everything toward a **free masterclass** booking. SEO-driven, fast, trust-first.
2. **The LMS** (authenticated) — where enrolled students learn, instructors teach, the placement team runs the job pipeline, and admins run everything.

Both share: the same **design system** (Section 2), the same **database** (Section 8), the same **brand voice** (Section 3), and the same **auth** (Section 7).

Recommended stack (Section 5): Next.js 15 (App Router) + TypeScript + Tailwind + PostgreSQL + Prisma + a background worker. Rationale inside.

Non-negotiables: - Follow the **exact colour tokens and fonts** in Section 2. No substitutions. - Never render outcome claims (98%, ~90%) without the disclaimer footnote (Section 3.4). - Never fabricate a placement guarantee anywhere in copy (Section 3.3). This is a legal + brand rule. - All money handled server-side; never trust client-sent prices (Section 9). - Ship accessible (WCAG 2.1 AA), mobile-first, and fast (Section 11).

1. What BrowseJobs is

BrowseJobs is an **AI-driven IT skilling & placement platform**. Founded in London (2013), expanded to India (2020), office in Whitefield, Bengaluru. The core differentiator:

The syllabus is not written — it's reverse-engineered. An AI system monitors up to ~50 real & mock interviews per day, extracts the questions companies are actually asking this month, and the course syllabus is rebuilt around that live demand. Students study only what's actually asked.

The business model is **trust-first**: three free steps (counselling + written career report → live masterclass → 7-hour Python bootcamp) before a student pays anything. Then a registration fee, and a placement fee that is **only** due after the student is actually placed.

Company legal entity: IBrowseJobs Technologies Pvt Ltd **Primary domain:** browsejobs.ai (browsejobs.in 301-redirects to it) **Contact:** +91 86185 19825 · hello@browsejobs.ai **Office:** Fl 3, Channasandra Main Rd, Ambedkar

Nagar, Whitefield, Bengaluru, Karnataka 560066 **Hours:** Mon–Sat, 9:00 AM – 7:00 PM IST **Socials:** LinkedIn (browsejobsconsultants), Instagram (browsejobs_6666), YouTube (@BrowseJobs), Facebook (BrowseJobs — Transform Your Career) **Recognition:** ILA 2022 award, Global Achievers Award

2. Design System (BINDING — do not deviate)

This design system is used across the **marketing site, the LMS, brochures, and every document**. It already exists as a house style; the website **MUST** match it so print and web feel like one brand.

2.1 Colour tokens

Define these as CSS variables / Tailwind theme tokens exactly:

TOKEN	HEX	USE
--ink	#0A1220	Primary text, sidebars, dark "Proof Engine" panels
--ink-2	#1B2A44	Secondary text
--deep	#0E3FA9	Deep navy — gradients, secondary blue, headings on light
--blue	#1B6DF0	Primary accent — buttons, links, numbers, kickers, focus rings
--sky	#E7F1FE	Light blue fills, callouts
--paper	#F6F9FE	Page background (light)
--line	#DCE6F5	Borders, dividers
--green	#0BA860	Verify green — "free", proof, promises we keep, success states
--green-bg	#E6F7EF	Green card fills
--red	#D64545	Warn red — "never say", refused promises, errors, destructive
--amber	#F5A623	Stars + coach notes ONLY. Do not use amber for anything else.
--muted	#5A6B85	Muted text, captions, disclaimers

Semantic rules: - Green = free / verified / kept-promise / success. Never use green for a paid CTA. - Red = refused-promise / danger / error only. Never decorative. - Amber = review stars and "coach note" callouts only. - Blue is the single primary action colour. One primary CTA per view.

2.2 Typography

FAMILY	WEIGHTS	USE
Sora	800 (display), 700	All headings. Letter-spacing <code>-0.02em</code> on large display.
Inter	400, 500, 600	All body text, UI, labels.
IBM Plex Mono	500, 600	ALL numbers, data, stats, kickers, labels, code. Wide letter-spacing (<code>0.02em</code> – <code>0.24em</code> for kickers).

Rule: **every number a user reads** (prices, stats, counts, dates, durations, percentages) renders in IBM Plex Mono. This is a signature of the brand.

Load via Google Fonts (`Sora:wght@600;700;800` , `Inter:wght@400;500;600;700` , `IBM+Plex+Mono:wght@500;600`) with `preconnect` and `display=swap` .

2.3 Signature UI patterns (reuse across site + LMS)

1. **Kicker** — a mono, uppercase, wide-letterspaced eyebrow label above headings. Blue normally, green when the section is about something free/verified. Example: `THE SYLLABUS ENGINE — REBUILT MONTHLY` .
2. **Proof Engine panel** — the signature dark (`--ink`) panel. Used to show the AI loop **LISTEN** → **EXTRACT** → **REBUILD** and live stats. On the LMS dashboard, reuse this panel to show the student their live progress.
3. **Stat band** — a 4-up row of big mono numbers (`50/day` , `~90%` , `98%` , `1 year`). MUST always be immediately followed by the disclaimer (Section 3.4).
4. **Promise cards (green/red pair)** — side-by-side: green "What we promise in writing" vs red "What we will never tell you." A core trust device.
5. **Free ladder** — 4 stepped cards: 3 green "FREE" rungs + 1 blue "STEP 04" paid rung. The visual spine of the funnel.
6. **Script / verbatim block** — blue left-rule block for quoted text.
7. **Coach note** — amber left-rule callout for tips/guidance.
8. **Left navy rail** — vertical navy rail with rotated document/section name + timeline dots (used in print; optional accent in web section dividers).
9. **Footer line** — `Every promise in writing · Every call recorded & AI-monitored` .

2.4 Component style rules

- **Radius:** cards `14px` , large panels `22px` , pills `999px` , inputs `10px` .
- **Shadow:** soft only — `0 10px 40px rgba(10,18,32,.10)` . No harsh drop shadows.
- **Buttons:** primary = solid blue, white text, subtle blue glow shadow. Ghost = transparent, `--line` border, ink text. One primary per screen.
- **Motion:** subtle reveal-on-scroll (fade + 18px rise). Respect `prefers-reduced-motion` — disable all motion when set.
- **Spacing:** generous. Sections ~72px vertical on desktop, ~52px mobile.
- **Icons:** line icons, 1.5–2px stroke, in `--blue` or `--ink` . (Lucide is fine.)

3. Brand Voice & Compliance (READ TWICE)

3.1 Voice

Direct, honest, confident, warm. Short sentences. No hype adjectives ("world-class," "revolutionary," "best-in-class"). The brand's power is **radical honesty as a sales strategy** — say the true thing others won't. Speak to the reader as a peer making a serious career decision.

3.2 Positioning line

"This syllabus was not written. It was reverse-engineered."

Tagline options (use "Built from real interviews." as primary): Built from real interviews. / Study what's asked. Get hired. Keep "Learn. Build. Transform. Get Hired." as a secondary/legacy line.

3.3 Claims you MUST NEVER make (legal + brand)

These re-trigger ad-policy problems and are dishonest. Never render them anywhere — site, LMS, emails, meta tags: - "Guaranteed job" / "100% placement guarantee" / "assured placement" - "We'll adjust/fabricate your experience" — we never fabricate employment - Any fixed salary promise - Any claim implying a shortcut or that hiring is certain

The honest framing (use this instead): "Nobody can guarantee employment — the market decides. What we put in writing: [the process]."

3.4 The disclaimer (MANDATORY next to any stat)

Whenever 98% , ~90% , 50/day , salary figures, or 5,000+ / 4.9/5 appear, render this immediately after, in muted mono:

Based on BrowseJobs internal data. Historical figures — not a promise of individual outcome. Hiring depends on the live market and your performance.

Store this string once as **DISCLAIMER** and reuse. Do not paraphrase it away.

3.5 The honesty doctrine (a real feature, build it)

- "Don't trust us. Verify us." section with 3 checks the user can do on Naukri in 15 minutes.
- Promise / Never cards.
- Every commitment framed as "in writing."
- "Every call recorded & AI-monitored" appears in the footer.

3.6 Fee model (render exactly; all figures server-owned)

- Registration: ₹30,000 — payable only AFTER the free masterclass + bootcamp. EMI: $3 \times ₹10,000$.
- Placement fee: first 3 months' CTC, due only after the student accepts an offer, paid as 6 monthly EMIs from the new salary. The ₹30,000 registration is adjusted inside the placement fee.
- Worked example @ ₹12 LPA offer: 3 months' CTC = ₹3,00,000 – ₹30,000 already paid = ₹2,70,000 in 6 EMIs.
- 30-day money-back guarantee — any reason, full refund in first 30 days, in writing.

4. The three free steps (the funnel spine)

Every marketing CTA funnels here. Build these as first-class concepts in data + UI: 1. **Free counselling + written Career Analysis Report** (`lead_type = counselling`) 2. **Free live Masterclass** (`lead_type = masterclass`) ← the primary conversion 3. **Free 7-hour Python Bootcamp** (`lead_type = bootcamp`) 4. → then **paid registration** (₹30,000) → enrolment → LMS access.

5. Recommended Tech Stack (my CTO recommendation)

You asked me to choose. For a platform that is **both** a fast SEO marketing site **and** a rich authenticated LMS with four roles, real-time-ish progress, video, and a payments + placement pipeline:

5.1 Stack

- **Framework: Next.js 15 (App Router) + TypeScript.** One codebase serves SSR/SSG marketing pages (great SEO, fast) AND the authenticated LMS (React Server Components + client interactivity). This avoids running two separate apps.
- **Styling: Tailwind CSS** with the design tokens from Section 2 wired into `tailwind.config`. Add a small set of primitives (Button, Card, Kicker, StatBand, ProofPanel, PromiseCards) in a `/components/brand` folder so the design system is enforced in code.
- **UI primitives:** shadcn/ui (Radix under the hood) for accessible dialogs, dropdowns, tabs, toasts. Restyle them with brand tokens.
- **Database: PostgreSQL.** Relational integrity matters here (enrolments, payments, placement pipeline, attendance).
- **ORM: Prisma.** Type-safe, migrations, great DX with Claude Code.
- **Auth: Auth.js (NextAuth v5)** with email/password + OTP, role-based sessions (Section 7). Or Lucia if you prefer fewer abstractions. Passwords hashed with bcrypt/argon2.
- **File/video storage:** S3-compatible (AWS S3 or Cloudflare R2). Video streamed via a provider (Mux or Cloudflare Stream) — do NOT serve raw MP4s from the origin; use signed playback URLs so course videos aren't freely downloadable.
- **Background jobs:** a queue (BullMQ + Redis, or a hosted equivalent) for emails, WhatsApp sends, CRM sync, certificate generation, reminder notifications.
- **Payments: Razorpay** (India-first, UPI/cards/EMI). Orders + webhooks (Section 9).
- **Email:** transactional provider (Resend / AWS SES). **WhatsApp:** Cloud API (primary channel for this audience).
- **Search (optional later):** Postgres full-text first; add Meilisearch/Typesense if catalogue grows.
- **Hosting:** Vercel for the Next.js app (or a Node host if you prefer), managed Postgres (Neon/Supabase/RDS), Redis (Upstash), R2/S3 for assets.

5.2 Why not keep PHP?

The current marketing site is PHP 8 + MySQL and is fine as a brochure site. But an LMS with four roles, video, real-time progress, a placement CRM, and background jobs is a product, not a page. Next.js + Postgres gives you: one language (TypeScript) across front and back, type-safe DB access, server components for speed + SEO, and a huge ecosystem for auth/video/payments. It's the lower-risk long-term choice. **Migration note:** port the existing marketing copy, courses, testimonials, FAQs, and settings from the current MySQL schema into the new Postgres schema (Section 8) — the content is reusable; only the platform changes.

5.3 Repo shape (monorepo-lite, single Next app)

```
/app
/(marketing)      # public site: /, /courses, /[courseSlug], /masterclass, /about, /contact, /reviews, legal
/(auth)           # /login, /signup, /forgot, /verify
/(lms)
  /student        # dashboard, my-courses, course player, assignments, live sessions, career, certificates
  /instructor     # my batches, content, gradebook, live sessions, doubts
  /placement      # candidate pipeline, job posts, submissions, interviews
  /admin          # everything (Section 6.4)
/api              # route handlers: auth, payments (order/verify/webhook), leads, uploads, crm-sync, webhooks
/components
  /brand          # Button, Card, Kicker, StatBand, ProofPanel, PromiseCards, FreeLadder, Disclaimer
  /ui             # shadcn primitives (restyled)
/lib              # db (prisma), auth, razorpay, storage, email, whatsapp, rbac, seo
/prisma/schema.prisma
/content          # editable copy blocks, seeded from current site
/emails           # react-email templates
/workers          # queue processors
/public           # logo, favicon, og image
```

6. Feature Requirements

6.1 Marketing website (public, SEO-critical)

Pages & routes: | Route | Page | Primary goal | |---|---|---| | [/](#) | Home | Hook → Proof Engine → stats → courses → free ladder → verify-us → fees → testimonials → FAQ → CTA | | [/courses](#) | Course catalogue | List all 7 programs (live + coming-soon) | | [/\[courseSlug\]](#) | Course detail | Full syllabus, outcomes, tools, projects, placement engine, fees, FAQ, enrol CTA | | [/masterclass](#) | Masterclass landing | Primary ad destination; single goal = book free seat | | [/about](#) | About | Story, method, honesty doctrine, founder | | [/reviews](#) | Reviews | Testimonials + screenshot gallery | | [/contact](#) | Contact | Call/WhatsApp/email/map + form | | [/privacy-policy](#), [/terms](#), [/refund-policy](#) | Legal | DPDP-aligned (Section 10) | | [/payment-status](#) | Post-payment | Success/failure states |

The 7 programs (4 live, 3 waitlist): - **Live:** Data Engineering · DevOps & Cloud · Python Backend · Data Analytics - **Coming soon (waitlist):** Agentic AI · Cyber Security · ServiceNow

Course content (syllabus modules, tools, projects, outcomes, roles) already exists in the brochures — seed it into the [courses](#) table. Each live course has ~8–9 modules, a tools list, 3–5 CV-ready projects, an outcomes list, and target roles.

Conversion mechanics (build all): - Sticky mobile CTA bar → "Book Free Masterclass." - Lead modal with 3 variants (masterclass / counselling / waitlist) — name, phone (WhatsApp), email, course. - UTM capture (source/medium/campaign) persisted to the lead + to session for attribution. - Every lead saved to DB and POSTed to the CRM endpoint (configurable) + fires WhatsApp confirmation. - Analytics events: [LeadFormOpen](#), [Lead](#), [InitiateCheckout](#), [Purchase](#) (GA4 + Meta Pixel, IDs from settings). - Enrolment flow → Razorpay checkout → verify → create student account → email/WhatsApp credentials.

SEO (Section 11): SSG where possible, per-page meta, canonical, OG/Twitter, JSON-LD

([EducationalOrganization](#), [Course](#) with INR offer, [FAQPage](#)), dynamic [sitemap.xml](#), [robots.txt](#), fast LCP.

6.2 LMS — Student role

The student's home after enrolment. Reuse the Proof Engine panel to show **their** live status.

- **Dashboard:** enrolled program, next live session (date/time IST + join link), progress %, upcoming assignment, placement-readiness score, announcements.
- **My Courses / Course Player:**
 - Curriculum tree (modules → lessons). Lesson types: video, reading, code exercise, quiz, assignment, live-session recording.
 - Video player with signed playback URLs, resume-where-left-off, playback speed, captions, notes per lesson.
 - Mark-complete, per-lesson progress, module completion, overall % (drives dashboard + certificate eligibility).
 - Resources/downloads per lesson; lifetime access (1 year unlimited per brand promise) — enforce access window from enrolment.
- **Assignments & Projects:** brief, submission (file/URL/repo), instructor feedback, grade, resubmission. The 3–5 CV-ready projects per course live here.
- **Quizzes/Assessments:** auto-graded MCQ + code checks where possible; scores feed readiness.
- **Live Sessions:** schedule (IST), join link (Zoom/Meet/embedded), auto-attach recording afterward, attendance capture.
- **Doubts/Q&A:** per-lesson threads to instructors; WhatsApp-style support channel.
- **Mock Interviews:** book slots, receive AI-analysed feedback + score; scores feed the placement-readiness metric ("readiness decided on data").
- **Career:** resume builder (ATS), LinkedIn/GitHub checklist, interview question bank (role-specific, refreshed), placement-readiness meter with what-to-improve.
- **Certificates:** auto-generated on completion (branded PDF using the design system), verifiable via a public URL/QR.
- **Billing:** registration invoice, EMI schedule, placement-fee agreement + status, 30-day-guarantee window countdown.
- **Notifications:** in-app + email + WhatsApp for sessions, deadlines, feedback, placement events.

6.3 LMS — Instructor role

- **My Batches:** assigned cohorts, rosters, per-student progress + attendance.
- **Content authoring:** create/edit modules, lessons, upload/link videos, attach resources, build quizzes, set assignments. (Or admins author; instructors edit — make it role-permissioned.)
- **Gradebook:** view submissions, grade, leave feedback, request resubmission.
- **Live sessions:** schedule, start, upload/auto-attach recordings, mark attendance.
- **Doubts:** answer student Q&A threads.
- **Mock interviews:** conduct, score, submit structured feedback that feeds readiness.
- **Announcements:** post to a batch.

6.4 LMS — Placement team role

This is the "placement engine" made operational. Three channels: Naukri optimisation, 3,000+ HR broadcast, direct clients. - **Candidate pipeline (Kanban):** stages — [Not ready](#) → [In prep](#) → [Interview-ready \(mock-data gated\)](#) → [Profile live \(Naukri\)](#) → [Submitted](#) → [Interviewing](#) → [Offer](#) → [Placed](#) . Readiness gate uses mock-interview scores (data, not opinion). - **Candidate profile:** progress, mock scores, projects, resume versions,

target roles, verification status (real projects/internship — BGV-safe). - **Job posts / client requirements:** create roles from client companies; tag skills; match to ready candidates. - **Submissions & interviews:** track which candidate went to which company, interview dates, outcomes, feedback loop. - **HR broadcast list:** manage the 3,000+ recruiter network; log shares. - **Placement records:** offer details (company, role, CTC) → triggers **placement-fee schedule** (first 3 months' CTC, 6 EMIs, ₹30k adjusted) in billing. - **Reporting:** funnel metrics (attend-to-place rate feeding the 98% figure, always with disclaimer), source effectiveness.

6.5 LMS — Admin role (superuser)

- **Everything above**, plus:
- **CMS:** edit all marketing copy blocks, courses (modules/tools/projects/fees/SEO), testimonials, FAQs, page content — no code changes to update the site.
- **Users & roles:** create/suspend users, assign roles + batches, impersonate (audited) for support.
- **Enrolments & payments:** view/refund, EMI schedules, guarantee windows, invoices.
- **Leads:** full lead table, filters, CSV export, CRM-sync status, re-sync.
- **Batches/cohorts:** create, assign instructors + students, schedule.
- **Settings:** Razorpay keys, CRM endpoint + token, GA4/Pixel IDs, WhatsApp/email config, all contact/stat/disclaimer strings.
- **Certificates:** templates, issue/revoke, verify.
- **Analytics dashboard:** enrolments, revenue, funnel, batch health, placement funnel.
- **Audit log:** sensitive actions (refunds, role changes, impersonation, key changes).

7. Auth & RBAC

- **Roles:** `student`, `instructor`, `placement`, `admin`. A user has exactly one primary role (admin can act across all). Store as an enum; gate every route + API by role.
- **Auth methods:** email + password (argon2/bcrypt) and phone OTP (this audience is phone-first). Optional Google sign-in.
- **Sessions:** secure, httpOnly cookies; short-lived access + refresh, or Auth.js session. CSRF protection on all mutations.
- **Route protection:** middleware guards `/(lms)/*` by authentication; per-segment guards by role (`/admin/*` → admin only, etc.). Never rely on hiding UI — enforce on the server/API for every action.
- **Account creation:** a student account is auto-provisioned on successful paid enrolment (or admin invite). Credentials sent via email + WhatsApp. Force password set on first login.
- **Permissions matrix (enforce server-side):**
 - Student: own data only.
 - Instructor: assigned batches only.
 - Placement: candidate pipeline + job/placement data; read student progress; no billing edits.
 - Admin: all.
- **Security:** rate-limit auth + lead + payment endpoints; audit sensitive actions; secrets in env vars only (never in the repo); validate + sanitise all input (zod schemas on every API route).

8. Data Model (PostgreSQL / Prisma)

Model at least these tables. Names indicative; keep types tight and add indexes on FKs + lookup columns.

Identity & org - **User** (id, name, email unique, phone, passwordHash, role enum, emailVerified, phoneVerified, avatarUrl, createdAt) - **Batch** (id, courseId, name, startDate, endDate, instructorId, mode, status) - **Enrollment** (id, userId, courseId, batchId, status enum[pending,active,completed,refunded], accessExpiresAt, createdAt)

Catalogue / content (shared with marketing site) - **Course** (id, slug unique, title, shortTitle, tagline, heroText, status enum[live,coming_soon], durationLabel, regFee, emiText, placementFeeText, seoTitle, seoDesc, sortOrder) - **CourseModule** (id, courseId, order, title, summary) - **Lesson** (id, moduleId, order, title, type enum[video,reading,code,quiz,assignment,live_recording], videoAssetId, contentMd, durationSec, resourcesJson, isPreview) - **CourseMeta** — arrays for **roles**, **outcomes**, **tools**, **projects** (or normalize into **CourseRole**, **CourseOutcome**, **CourseTool**, **CourseProject**) - **Testimonial** (id, name, course, rating, body, isActive, sortOrder) - **Faq** (id, courseId nullable, question, answer, isActive, sortOrder) - **PageContent** (key unique, label, valueMd) — editable marketing copy blocks - **Setting** (key unique, value) — razorpay keys, crm endpoint/token, GA4/Pixel IDs, contact + stat + disclaimer strings

Learning & progress - **LessonProgress** (id, userId, lessonId, status enum[not_started,in_progress,completed], lastPositionSec, completedAt) — unique (userId, lessonId) - **Assignment** (id, lessonId/courseId, title, briefMd, dueAt, maxScore) - **Submission** (id, assignmentId, userId, url/fileKey, note, status enum[submitted,graded,resubmit], score, feedbackMd, gradedById, gradedAt) - **Quiz** (id, lessonId, questionsJson) - **QuizAttempt** (id, quizId, userId, score, answersJson, takenAt) - **LiveSession** (id, batchId, title, startsAt, joinUrl, recordingAssetId, status) - **Attendance** (id, liveSessionId, userId, status enum[present,absent,late]) — unique (liveSessionId, userId) - **DoubtThread** (id, lessonId, userId) - **DoubtMessage** (id, threadId, senderId, body, createdAt) - **MockInterview** (id, userId, interviewerId, scheduledAt, scores json, feedbackMd, readinessDelta) - **Certificate** (id, userId, courseId, serial unique, issuedAt, revoked, pdfKey, verifyToken)

Leads / marketing - **Lead** (id, leadType enum[masterclass,counselling,bootcamp,contact,waitlist], name, email, phone, course, message, utmSource, utmMedium, utmCampaign, page, ip, crmSynced, crmResponse, createdAt) — index (createdAt), (leadType)

Payments & placement - **Payment / Order** (id, enrollmentId nullable, userId, reference unique, purpose enum[registration,placement_emi], amount, currency, razorpayOrderId, razorpayPaymentId, status enum[created,paid,failed,refunded], paidAt) - **EmiSchedule** (id, userId, kind enum[registration,placement], totalAmount, installments, paidCount, nextDueAt, status) - **PlacementCandidate** (id, userId, stage enum[not_ready,in_prep,ready,profile_live,submitted,interviewing,offer,placed], readinessScore, targetRolesJson, resumeVersionsJson, ownerId) - **JobPost** (id, clientCompany, role, skillsJson, ctcRange, status, createdById) - **Placement** (id, userId, jobPostId, company, role, ctcAnnual, offerAcceptedAt) — creating this triggers the placement-fee **EmiSchedule** - **AuditLog** (id, actorId, action, targetType, targetId, metaJson, createdAt)

Seeding: seed the 4 live courses + 3 waitlist with real syllabus/tools/projects from the brochures; seed 6 real testimonials, 8 global FAQs, and all **Setting** / **PageContent** strings (including **DISCLAIMER** and contact info from Section 1).

9. Payments (Razorpay) — server-owned

- **Never trust client-sent amounts.** Look up the price server-side from **Course.regFee** (or the EMI schedule) before creating an order.

- **Flow:** client requests order → server creates Razorpay order + `Order(status=created)` → client opens Razorpay checkout → on success, client posts payment ids → server **verifies HMAC signature** AND re-fetches the payment from Razorpay to confirm `captured` + amount match → mark `paid`, provision access, fire receipts (email + WhatsApp), sync to CRM.
- **Webhook** (`/api/webhooks/razorpay`): verify webhook secret; handle `payment.captured` as the source of truth even if the browser closed. Idempotent.
- **EMI:** registration (3×₹10,000) and placement (6× from CTC) tracked in `EmiSchedule`; send reminders via the job queue.
- **Refunds:** admin-triggered, audited; the 30-day guarantee window is computed from enrolment date and shown to the student.
- **Placement fee** is created only when a `Placement` row is added (offer accepted), and the ₹30,000 registration is deducted inside it.

10. Legal & Compliance (India / DPDP Act 2023)

- **Privacy Policy, Terms, Refund Policy** pages — DPDP-aligned. Disclose: data collected, purposes, consent basis, Razorpay as processor, call recording + AI monitoring, CRM + analytics (GA4/Meta Pixel), placement data sharing **with consent**, retention windows, user rights (access/correct/erase/grievance), and a named **Grievance Officer**. Leave `[CIN]`, `[GST]`, and officer name as clearly-marked placeholders for Krish to fill.
- **Consent:** explicit checkbox linking to privacy policy on every lead/enrol form. Log consent (timestamp + version).
- **Call recording notice:** since counselling calls are recorded + AI-monitored, disclose it (already in footer + privacy policy).
- **Placement-fee / CTC recovery** requires a **signed enrolment agreement**, not click-wrap — generate the agreement and capture acceptance; flag for legal review.
- **Marketing-claims compliance:** enforce Section 3.3/3.4 in code — a shared `<Disclaimer/>` component and a lint rule/checklist so no stat ships without it.

11. Quality Bar

- **Accessibility:** WCAG 2.1 AA. Semantic HTML, labelled inputs, keyboard-navigable, visible focus rings (blue), colour-contrast checked (esp. muted text), `prefers-reduced-motion` honoured, alt text everywhere.
- **Performance:** LCP < 2.5s on 4G mobile for marketing pages. SSG/ISR for public pages, image optimisation, font `display=swap` + preconnect, code-split the LMS from marketing.
- **SEO:** per-page meta + canonical + OG/Twitter; JSON-LD (`EducationalOrganization`, `Course` +INR offer, `FAQPage`); dynamic `sitemap.xml`; `robots.txt`; clean URLs; `.in` → `.ai` 301.
- **Security:** OWASP top-10 hygiene, zod validation on every route, rate limits, secrets in env, audited sensitive actions, signed video URLs, no secrets client-side.
- **Responsive:** mobile-first; test at 360 / 768 / 1024 / 1440. Sticky mobile CTA on marketing.
- **i18n-ready:** copy in `PageContent` /dictionaries so Tanglish/Hindi variants are possible later (fonts already include Devanagari/Tamil/Kannada/Telugu in the print system).
- **Testing:** unit tests for pricing, RBAC, signature verification; e2e for enrol→pay→access and lead→CRM.

- **Observability:** error tracking (Sentry), structured logs, uptime check on payment webhook.
-

12. Suggested build order (ship in slices)

1. **Foundations:** repo, Tailwind + design tokens, brand primitives (Button/Card/Kicker/StatBand/ProofPanel/PromiseCards/FreeLadder/Disclaimer), Prisma schema + migrations, seed script.
2. **Marketing site:** home, course catalogue + detail, masterclass, about, reviews, contact, legal. Lead capture + CRM sync + analytics. SEO. (This can go live first and start generating leads.)
3. **Auth + payments:** signup/login/OTP, Razorpay order/verify/webhook, enrolment → account provisioning.
4. **Student LMS:** dashboard, course player, progress, assignments, quizzes, live sessions, certificates, billing.
5. **Instructor LMS:** batches, authoring, gradebook, live sessions, doubts, mock interviews.
6. **Placement module:** candidate pipeline, job posts, submissions, placements → billing trigger, reporting.
7. **Admin:** CMS, users/roles, enrolments/payments, leads, batches, settings, analytics, audit log.
8. **Hardening:** a11y pass, perf pass, security review, tests, observability.

Keep a `PROGRESS.md` and a `DECISIONS.md` (log every deviation from this spec with a reason). Ask before inventing brand copy, colours, or claims not in this document.

13. Quick reference (pin this)

- **Colours:** ink `#0A1220` · deep `#0E3FA9` · blue `#1B6DF0` · sky `#E7F1FE` · paper `#F6F9FE` · line `#DCE6F5` · green `#0BA860` · red `#D64545` · amber `#F5A623` (stars/coach only) · muted `#5A6B85`.
- **Fonts:** Sora 800 (headings) · Inter (body) · IBM Plex Mono (ALL numbers/labels/kickers).
- **CTA funnel:** everything → **Book Free Masterclass**.
- **Never:** guarantee a job · fabricate experience · show a stat without the disclaimer · trust a client-sent price.
- **Fees:** ₹30,000 reg (3×₹10k EMI) · placement = first 3 months' CTC (6 EMIs, ₹30k adjusted) · 30-day money-back.
- **Roles:** student · instructor · placement · admin.
- **Contact:** +91 86185 19825 · hello@browsejobs.ai · Whitefield, Bengaluru · browsejobs.ai.
